GND
* GND is not on the original schematic, but it is on the PCB. Pin 20 is only connected to a via going nowhere.
* Note that the original schematic had the 8T28 pins all messed up. Wrong order, and wrong names.

* Original schematic said:
C1 THRU C43 .1MF

Apart from the fact that C35 and C37–C39 are already acounted for, there is no footprint on the PCB for C43. It is marked as being excluded from the board and BOM.

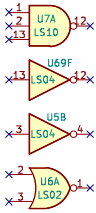

* The original schematic shows C45, polarized, 33uF, connected to +8V and GND, but there is no footprint on the PCB, hence it is marked as excluded from board and BOM.
